Description of Sample(s) : One submitted sample said to be AOK Portable Alkaline Ionizer.
Country of Origin : China

Date Sample(s) Received : 2009-04-14

Date Tested : 2009-04-15 to 2009-04-23

Investigation Requested : Refer to the next page.

Conclusion(s) : 1. The tested Extractable Heavy Metal of the submitted sample were found **complied** respective requirement(s) for the tested item(s) as stated in the German Food & Feed Acts LFGB and Regulation (EC) No. 1935/2004 (Material in contact with food regulation).
2. The tested dionized water of the submitted sample **passed** the World Health Organization (WHO) Guidelines for Drinking Water Quality.
3. The treated tap water which was stored in "AOK Portable Alkaline Ionizer" for 10 minutes. Magnesium content of the treated tap water increased from 2.1 mg/L to 4.7 mg/L.
4. pH of the treated tap water turned alkaline when comparing to the original tap water.

Remark(s) : The "AOK Portable Alkaline Ionizer" sample was activated by filling in 60°C hot water for 2 minutes and then rinsed 3 times by hot water before test.

Investigation Requested:

For "AOK Portable Alkaline Ionizer" :

1. For material : metal or metallic coating, except aluminium
- Extractable Heavy Metal (Lead, Cadmium, Chromium (VI) and Nickel).

For the deionized water which was stored in the "AOK Portable Alkaline Ionizer" for 10 minutes :

2. Color
3. Turbidity
4. Ammonia content
5. Chloride content
6. Copper content
7. Sodium content
8. Sulphate content

Comparison between tap water and tap water which was stored in the "AOK Portable Alkaline Ionizer" for 10 minutes :

9. Aluminium content
10. Calcium content
11. Iron content
12. Magnesium content
13. Potassium content
14. Zinc content
15. pH value (at 25°C)

Method(s) Used:

1. The sample was filled with distilled water at 100°C for 24 hours. The heavy metal content of extracting solution was then analysed using Atomic Absorption Spectrometry (AAS) and/or Inductively Coupled Plasma Spectrometry Optical Emission Spectrometry (ICP-OES)
